DETAILED ACTION

Allowable Subject Matter

Claims 1-8 are allowed.

The following is an examiner's statement of reasons for allowance:

The prior art taken either singularly or in combination fails to anticipate or fairly suggest the limitations of the independent claims, in such a manner that a rejection under 35 U.S.C. 102 or 103 would be proper. The prior art fails to teach a combination of all the claimed features as presented, for example, in independent claim 1, which include a zoom lens system having, in order from an object; a first lens group having negative refractive power; a second lens group having positive refractive power; and a third lens group having positive refractive power; the first lens group consisting only of a negative lens element and a positive lens element, the second lens group having at least two positive lens elements and at least one negative lens element, and the third lens group consists of one lens element; and when the state of lens group positions varies from a wide-angle end state to a telephoto end state, a distance between the first lens group and the second lens group decreases, a distance between the second lens group and the third lens group increases, and the third lens group is fixed; as well as satisfying the recited numerical condition.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Conclusion

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Nanba et ('808), Ori, Noguchi et al and Tanaka ('337) are all cited to show zoom lens systems have the recited -, +, + configuration with a similar structure, but do not teach a fixed third lens group and satisfying the recited numerical condition.
